

Previous QL Editor version information

V4.1.0 to V4.5.0

New Feature

- Now supports CL/QL firmware V4.50.
For details, refer to the CL/QL V4.5 Supplementary Manual.

Fixed bug

- Solved a problem in which the HA parameters did not synchronize even if the Editor and the CL/QL unit was synced when there was an I/O device with the With Recall setting tuned off.

V4.0.1 to V4.1.0

New Feature

- Now supports QL firmware V4.10.
- Added the Data Form option for writing CSV files.
- Added specifications for the CSV file read function.

For details, refer to the QL V4.1 Supplementary Manual.

V4.0.0 to V4.0.1(Win)

Fixed bug

- Solved a problem in which V4.0.0 editor was not able to load the data which had been made on the QL V1.0x or CL V1.70/V2.0x, and would show the warning message "Out of Range".

V3.1.0 to V4.0.0

New Feature

- Now supports QL firmware V4.00.
- You can now read and write CSV files containing channel names (and color and icon), input patching, output patching and other patching data.

V4.0.0 to V4.0.1(Mac)

Fixed bug

- Solved a problem in which V4.0.0 editor was not able to load the data which had been made on the QL V1.0x or CL V1.70/V2.0x, and would show the warning message "Out of Range".

V3.1.0 to V4.0.0

New Feature

- Now supports QL firmware V4.00.
- You can now read and write CSV files containing channel names (and color and icon), input patching, output patching and other patching data.

V3.1.0(Win)

New Feature

- Now supports QL firmware V3.10.

Improvements

- When a QL console has the HA of another QL console patched to its input channel (via the Port to Port function), the parameter control from QL Editor now matches that of the QL console.
- Solved some minor bugs.

V3.1.0(Mac)

New Feature

- Now supports QL firmware V3.10.
- Now supports Mac OS X 10.11.

Improvements

- When a QL console has the HA of another QL console patched to its input channel (via the Port to Port function), the parameter control from QL Editor now matches that of the QL console.
- Solved some minor bugs.

V3.0.0(Win)

New Feature

- Now supports QL Firmware V3.00.
- Added the CH COPY/CH MOVE (channel copy / channel move) function by using the mouse in the Overview window.

V3.0.0(Mac)

New Feature

- Now supports QL Firmware V3.00.
- Added the CH COPY/CH MOVE (channel copy / channel move) function by using the mouse in the Overview window.

Fixed Bug

- Now supports QL Firmware V3.00.
- Solved a problem in which the uninstaller did not support Gatekeeper.

Editor V1.0.3

New Feature

- Now supports QL Firmware V1.07

Note

Regardless of the file type of the opened file, executing SAVE or SAVE AS in this window will save only the library data relative to the opened tab. Since the All type Console File is saved as a Console File containing only library data if overwritten by the SAVE operation, we recommend that you preserve the file contents by making an alias copy with SAVE AS.

Editor V1.0.2

Fixed Bug

- Solved a problem in which the patching would not be reflected, if you loaded (or synchronized from QL) a setting file in which an empty premium rack was mounted.

Editor V1.0.0

- The initial release version.
